**The only UV equipment choice for quality refinishers of Tubs and tile**

**NUMBER ONE IN UV CURING SYSTEMS 800-398-5456**

**FOR YOUR SAFETY ALWAYS COVER EYES AND SKIN WHEN USING UV**

## ***NEW INFORMATION***

### ***For tub n tile curers.***

If the outside temperature is going **below 50°F do NOT** leave your lamp in the truck overnight or warm up to 60°F before trying to start.

**Remember** when you have finished using the lamp **DO NOT SHUT OFF BY PULLING OUT THE PLUG!** if you do it will damage the fan blades and this will not be covered by warranty. In the event of a power failure immediately turn the lamp face up so that you can see the bulb.

**Why?** The lamp surface runs at approx 600°C and is cooled with a fan that is controlled by the thermostat, when its safe to pull the plug the thermostat will have stopped the fan. In the event of a power failure turning the lamp face up will allow the heat to rise thereby protecting the fan blades from heat distortion.
